a) $\frac{3.36}{100} + \frac{5.44}{100} + \frac{2.20}{100} = \frac{108 + 220 + 40}{100} = \frac{368}{100} = \underline{3,68}$

b) $\frac{3.36}{100} + \frac{4.32}{100} + \frac{2.32}{100} = \frac{108 + 128 + 64}{100} = \frac{300}{100} = \underline{\underline{3}}$

c) $\frac{368 +}{300, 4} \cong \underline{\underline{1,23}}$ times, part b is faster than part a by

$\underline{\underline{123\%}}$ or $\underline{\underline{1,23}}$
